Excellence in home inspection

OVER	OVERVIEW Report No. 89284											
233 Rosethorn Ave, Toronto, ON July 20, 2024 www.carsondunlop.c												
OVERVIEW	ROOFING	EXTERIOR	STRUCTURE	ELECTRICAL	HEATING	COOLING	INSULATION	PLUMBING	INTERIOR			
OUR ADVICE	APPENDIX	REFERENCE										

This Overview lists some of the significant report items if any were identified. Please read the entire report before making any decisions about the home; do not rely solely on the Overview.

FOR THE BUYER

There are two elements to a home inspection - the inspection itself and the report. This report is helpful, but the inspection is equally important. You need both elements to make an informed decision. Call us at 416-964-9415 to book a Buyers Review with the inspector. Our fee is \$260. Without a Buyers Review, our obligation and liability are limited to the seller.

When you move into the home you may find some issues not identified in the report. That is to be expected for a few reasons, such as furniture and storage that has been removed, changes to the property conditions, etc. Therefore, we suggest you allow roughly 1% of the value of the home annually for maintenance and repair.

Roofing

RECOMMENDATIONS \ General

Condition: • The roof inspection was restricted by limited access.The age and condition of the roof covering were not determined.Task: Further evaluation by a specialist.Time: As soon as practical

SLOPED ROOFING \ Asphalt shingles

Condition: • Incorrect slope. Water is being directed towards the house. This configuration is ill-advised. Additionally, the flashing is not well fit and/or secured at some areas. Location: Rear Basement Walkout Task: Improve Time: As soon as possible Cost: \$3,500 and up

Here are a few thoughts to help you stay warm, safe and dry in your home.

All homes require regular maintenance and periodic updates. Maintenance programs help keep homes safe, comfortable and efficient. Roofs, furnaces and air conditioners for example, wear out and have to be replaced. Good maintenance extends the life of these house systems. Refer to Our Advice tab for more details regarding maintenance of your home.

Water is the biggest enemy of homes, whether from leaks through the roof, walls or foundation, or from plumbing inside the home. Preventative maintenance and quick response to water problems are important to minimize damage, costs and help prevent mould.

OVER	OVERVIEW Report No. 89284

OUR ADVICE	APPENDIX	REFERENCE										

Environmental consultants can help with issues like mould, indoor air quality and asbestos. If you need help in these areas, we can connect you with professionals.

All recommendations in the report should be addressed by qualified specialists. Our ballpark costs and time frames are provided as a courtesy and should be confirmed with quotes from specialists. Minor costs in the report are typically under \$1,000.

COMMENTS \ Additional

Condition: • Insulation on or above the ducts may contain asbestos. Health Canada recommends the insulation be left in place undisturbed unless there is a risk of asbestos fibers being released into the house air. If this is a concern, a specialist should be consulted. If the insulation is damaged or is to be disturbed, and if it contains asbestos (confirm with laboratory test), precautions should be taken that asbestos fibers are not released into the house air. Please see the Asbestos article in the Supplementary section of the digital Home Reference Book located in the REFERENCE section of this report.

COOLING

INSULATION PLUMBING

INTERIOR

OUR ADVICE APPENDIX REFERENCE

ROOFING

Description

General: • Interior finishes are in good repair overall. • Interior finishes are high quality for the most part.

Observations and Recommendations

BASEMENT \ Leakage

Condition: • Almost every basement (and crawlspace) leaks under the right conditions. Based on a one-time visit, it's impossible to know how often or severe leaks may be. While we look for evidence of past leakage during ourconsultation, this is often not a good indicator of current conditions. Exterior conditions such as poorly performing gutters and downspouts, and ground sloping down toward the house often cause basement leakage problems. Please read Section 10.0 in the Interior section of the Home Reference Book before taking any action. You can find this in the Reference tab at the end of the report.

To summarize, wet basement issues can be addressed in 4 steps:

1. First, ensure gutters and downspouts carry roof run-off away from the home. (relatively low cost)

2. If problems persist, slope the ground (including walks, patios and driveways) to direct water away from the home. (Low cost if done by homeowner. Higher cost if done by contractor or if driveways, patios and expensive landscaping are disturbed.)

3. If the problem is not resolved and the foundation is poured concrete, seal any leaking cracks and form-tie holes from the inside. (A typical cost is \$300 to \$600 per crack or hole.)

4. As a last resort, dampproof the exterior of the foundation, provide a drainage membrane and add/repair perimeter drainage tile. (High cost)

BASEMENT \ Cold room/Root cellar

Condition: • Door should be insulated To truly be a Cold Room, an insulated (and weather-stripped) door should be installed to separate the cold side from the warm (interior) side.

Task: Replace Time: As required

Inspection Methods and Limitations

Percent of foundation not visible: • 50 %

Description

OUR ADVICE FOR LOOKING AFTER YOUR HOME: • Home maintenance is an important responsibility. It protects your investment, extends life expectancy and helps avoid significant expenses. This document is an integral part of the report, and will help you avoid many common problems and reduce costs.

Priority Maintenance and Home Set-Up: • The Home Set-Up and Maintenance chapter in the Home Reference Book provides important information regarding things that are done once when moving in, as well as regular maintenance activities.

Please be sure to follow these maintenance guidelines. The Home Reference Book is included under the REFERENCE tab in this report.

Basement/Crawlspace Leakage: • Basement water leakage is the most common problem with homes. Almost every basement and crawlspace leaks under the right conditions. Good maintenance of exterior grading, gutters and downspouts is critically important.

For more details, please refer to Section 10 of the Interior chapter of the Home Reference Book, which is in the REFERENCE tab in this report.

Roof - Annual Maintenance: • It is important to set up an annual inspection and tune-up program to minimize the risk of leakage and maximize the life of the roof. Roof leaks may occur at any time and are most often at penetrations or changes in material. A leak does not necessarily mean the roof needs to be replaced.

Roof coverings are disposable and have to be replaced from time to time. Asphalt shingles, for example, last roughly 15 years.

Exterior - Annual Maintenance: • Annual inspection of the exterior is important to ensure weather-tightness and durability of exterior components. Grading around the home should slope to drain water away from the foundation to help keep the basement dry.

Painting and caulking should be well maintained. Particular attention should be paid to horizontal surfaces where water may collect.

Joints, intersections, penetrations and other places where water may enter the building assembly should be checked and maintained regularly.

Garage Door Operators: • The auto reverse mechanism on your garage door opener should be tested monthly. The door should also reverse when it meets reasonable resistance, or if the 'photo eye' beam is broken.

Electrical System - Label the Panel: • Each circuit in the electrical panel should be labelled to indicate what it controls. This improves both safety and convenience. Where the panel is already labelled, the labelling should be verified as correct. Do not rely on existing labeling.

Ground Fault Circuit Interrupters and Arc Fault Circuit Interrupters: • These should be tested monthly using the test buttons on the receptacles or on the breakers in the electrical panel.

Heating and Cooling System - Annual Maintenance: • Set up an annual maintenance agreement that covers parts and labour for all heating and cooling equipment. This includes gas fireplaces and heaters, as well as furnaces, boilers and air conditioners. Include humidifiers and electronic air cleaners in the service agreement. Arrange the first visit as soon as possible after taking possession.

Report No. 89284 233 Rosethorn Ave, Toronto, ON July 20, 2024 www.carsondunlop.com overview Roofing Exterior Structure ELECTRICAL HEATING COOLING INSULATION PLUMBING INTERIOR our Advice Appendix Reference ELECTRICAL HEATING COOLING INSULATION PLUMBING INTERIOR

Check filters for furnaces and air conditioners monthly and change or clean as needed. Duct systems have to be balanced to maximize comfort and efficiency, and to minimize operating costs. Adjust the balancing for heating and cooling seasons, respectively.

For hot water systems, balancing should be done by a specialist to due to the risk of leakage at radiator valves. These valves are not operated during a home inspection. • Check filters for furnaces and air conditioners monthly and change or clean as needed. Duct systems have to be balanced to maximize comfort and efficiency, and to minimize operating costs. Adjust the balancing for heating and cooling seasons, respectively. • For hot water systems, balancing should be done by a specialist due to the risk of leakage at radiator valves. These valves are not operated during a home inspection.

Bathtub and Shower Maintenance: • Caulking and grout in bathtubs and showers should be checked every 6 months, and improved as necessary to prevent leakage and water damage behind walls and below floors.

Water Heaters: • All water heaters should be flushed by a specialist every year to maximize performance and life expectancy. This is even more critical on tankless water heaters.

Washing Machine Hoses: • We suggest braided steel hoses rather than rubber hoses for connecting washing machines to supply piping in the home. A ruptured hose can result in serious water damage in a short time, especially if the laundry area is in or above a finished part of the home.

Clothes Dryer Vents: • We recommend that vents for clothes dryers discharge outside the home. The vent material should be smooth walled (not corrugated) metal, and the run should be as short and straight as practical. This reduces energy consumption and cost, as well as drying time for clothes. It also minimizes the risk of a lint fire inside the vent.

Lint filters in the dryer should be cleaned every time the dryer is used. There is a secondary lint trap in many condominiums. These should be cleaned regularly. There may also a duct fan controlled by a wall switch. The fan should be ON whenever the dryer is used.

Dryer ducts should be inspected annually and cleaned as necessary to help reduce the risk of a fire, improve energy efficiency and reduce drying times.

Fireplace and Wood Stove Maintenance: • Wood burning appliances and chimneys should be inspected and cleaned before you use them, and annually thereafter. We recommend that specialists with a WETT (Wood Energy Technology Transfer, Inc.) designation perform this work. Many insurance companies require a WETT inspection for a property with a wood burning device.

Smoke and Carbon Monoxide (CO) Detectors/Alarms: • Smoke detectors are required at every floor level of every home, including basements and crawlspaces. Even if these are present when you move into the home, we recommend replacing the detectors. We strongly recommend photoelectric smoke detectors rather than ionization type detectors. Carbon monoxide detectors should be provided adjacent to all sleeping areas.

These devices are not tested during a home inspection. Detectors should be tested every 6 months, and replaced every 10 years. Batteries for smoke and carbon monoxide detectors should be replaced annually. If unsure of the age of a smoke detector, it should be replaced.

Backwater Valve: • A backwater valve protects your home from a backup of the municipal sewer system. The valve may be equipped with an alarm to notify you of a backup. Please note: if the valve is closed due to a municipal sewer backup, you cannot use the plumbing fixtures in the home. The waste water is unable to leave the building and will back up through floor drains and the lowest plumbing fixtures.

• The valve should be inspected and cleaned as necessary at least

twice a year.

Sump Pump: • A sump pump collects storm water below the basement floor and discharges it safely to the exterior to prevent flooding. The discharge point should be at least 6 feet (2 m) away from the home. Best installations include backup power for the sump pump, so it will work in the event of a power outage. A high water alarm in the sump pump will notify you if the pump fails. Some installations include a backup pump.

The sump and pump should be inspected and tested four times a year.

For condominium owners: • Condominium owners - Maintenance and Repairs: There are two types of repairs that may be performed in a condo - repairs to an individual condo unit and repairs to common elements. Common elements are set out in the Condominium Declaration and will differ from one building to another. If repairs must be made inside your unit, you are responsible for making the repairs at your own expense. You are also responsible for the ongoing maintenance of your unit. The condominium corporation's board of directors is responsible for maintenance and repair of the common elements. Exclusive-use common elements, such as parking spaces or balconies are generally maintained by the condominium board.

Be Ready for Emergencies: Be sure you know where to shut off the water. Some condos have more than one shut off, and others need a special tool (key) to turn off water. Label each circuit on the electrical panel, and make sure you should know how to turn off the power. Keep a fire extinguisher suitable for grease fires near the kitchen.

Property Manager and Concierge/Security: Keep the contact information for these folks handy (perhaps on your phone) wherever you are. • Lint filters in the dryer should be cleaned every time the dryer is used. There is a secondary lint trap in many condominiums. These should be cleaned regularly. There may also a duct fan controlled by a wall switch. The fan should be ON whenever the dryer is used.

ASBESTOS, MOULD AND OTHER ENVIRONMENTAL ISSUES	
Environmental issues are outside the scope of a home inspection.	
Inspectors do not identify or evaluate issues such as asbestos, mou	ld
and indoor air quality. Many building materials contain asbestos, although homes built after 1990 are unlikely to have asbestos. Moi	sture
problems may result in visible or concealed mould. There are many	
sources of indoor air quality issues.	
An Environmental Consultant can assist with these types of issues.	
you need help, call us at 416-964-9415. More information is availab by clicking on the links below.	ne

APPENDIX 233 Rosethorn Ave, Toronto, ON July 20, 2024	Report No. 89284
OVERVIEW ROOFING EXTERIOR STRUCTURE ELECTRICAL HEATING COOLING INSULATION	PLUMBING INTERIOR
OUR ADVICE APPENDIX REFERENCE	
THIS CONTRACT LIMITS THE LIABILITY OF THE HOME INSPECTOR AND THE HOME INSPECTION	
COMPANY. PLEASE READ CAREFULLY BEFORE ACCEPTING.	
The term "Inspector" or "we" as used in this document means, collectively, the home inspector and Carson, Dunlop & Associates Ltd. ("CD"), the home inspection company. The home inspection ("Inspection") is performed in accordance with the Standards of Practice of the Canadian Association Home and Property Inspectors (the "Standards"). We recommend that you review the Standards bef agreeing to the Inspection. To access the Standards, click <u>CAHPI 2023 National Standards of Practice</u>	fore
1) PURPOSE AND LIMITATIONS	
The Inspector's report (the "Report") is an opinion of the present condition of the property based on visual examination of the readily accessible features of the building.	ıa
An Inspector is a generalist, rather than a specialist. The Inspection is a non-invasive performance review, rather than a design review. The Inspector does not perform calculations to determine whet mechanical, electrical, and structural systems, for example, are properly sized. The Inspector will not perform any engineering, architectural, plumbing or electrical services or assessments that require a occupational license.	t
The Inspector may report on deficiencies or conditions that are normally outside the scope of the Inspection, but this is done as a courtesy and does not change the scope of the Inspection.	
If the purpose or limitations are not clear, we encourage you to contact the Inspector to discuss the agreement before accepting and before the inspection.	
2) THE INSPECTION IS NOT TECHNICALLY EXHAUSTIVE	
The Inspection is a sampling exercise and is not technically exhaustive. While looking for major issue we typically come across some smaller issues. These may be included in the Report as a courtesy, bu not all issues will be identified. Cosmetic and other non-critical items are not part of the Inspection. Establishing the significance of an issue may be beyond the scope of the Inspection. Further evaluati by a specialist may be required at additional cost.	ıt
A Technical Audit is a more in-depth, technically exhaustive inspection of the home that provides mo information than an Inspection. We have both services available. By accepting and signing this Agreement, you acknowledge that you have chosen an Inspection instead of a Technical Audit.	bre
If you are concerned about any conditions noted in the Report, we strongly recommend that you cor a qualified specialist for a more detailed analysis.	nsult
3) THE INSPECTION IS AN OPINION OF THE PRESENT CONDITION OF THE VISIBLE COMPONENTS	
The Report is based on the visually observable conditions on the date and time of the Inspection. No deficiencies may be apparent due to weather conditions, inoperable systems, inaccessibility, etc. The Inspector cannot predict future conditions.	

OVERVIEW ROOFING EXTERIOR STRUCTURE ELECTRICAL HEATING COOLING INSULATION PLUMBING INTERIOR OUR ADVICE APPENDIX REFERENCE REFERENCE Inspection does NOT include or identify defects that are hidden behind walls, floors, ceilings, storage, furniture, etc. This includes inaccessible elements such as, but not limited to, wiring, heating, cooling, structure, plumbing and insulation. Inspectors do not remove wall coverings (including wallpaper), lift flooring (including carpet), or move storage or furniture. Intermittent problems may not be visible on an Inspection because they only happen under certain circumstances. For example, the Inspector may not discover leaks that occur only during certain weather conditions. Representative sampling is used for components where there are several similar items. This includes, but is not limited to, roofing, siding, masonry, caulking, windows, interior doors, electrical wiring, receptacles, switches, ducts and pipes, insulation and air/vapor barriers, and floor, wall, and ceiling surfaces. 4) THIS IS NOT A CODE-COMPLIANCE INSPECTION Inspectors do NOT determine whether the property complies with past or present building codes,
An Inspection does NOT include or identify defects that are hidden behind walls, floors, ceilings, storage, furniture, etc. This includes inaccessible elements such as, but not limited to, wiring, heating, cooling, structure, plumbing and insulation. Inspectors do not remove wall coverings (including wallpaper), lift flooring (including carpet), or move storage or furniture. circumstances. For example, the Inspector may not discover leaks that occur only during certain weather conditions. Representative sampling is used for components where there are several similar items. This includes, but is not limited to, roofing, siding, masonry, caulking, windows, interior doors, electrical wiring, receptacles, switches, ducts and pipes, insulation and air/vapor barriers, and floor, wall, and ceiling surfaces. 4) THIS IS NOT A CODE-COMPLIANCE INSPECTION
 but is not limited to, roofing, siding, masonry, caulking, windows, interior doors, electrical wiring, receptacles, switches, ducts and pipes, insulation and air/vapor barriers, and floor, wall, and ceiling surfaces. 4) THIS IS NOT A CODE-COMPLIANCE INSPECTION
Inspectors do NOT determine whether the property complies with past or present building codes,
electrical codes, fuel codes, fire codes, regulations, laws, by-laws, ordinances, or other regulatory requirements. Codes change regularly, and most homes do not comply with current codes.
5) THE INSPECTION DOES NOT INCLUDE HAZARDOUS MATERIALS
The Inspection does NOT address building materials that are suspected of posing a risk to health such as phenol-formaldehyde and urea-formaldehyde based insulation, fiberglass insulation and vermiculite insulation. Inspectors do NOT identify asbestos in roofing, siding, wall, ceiling or floor finishes, insulation, fireproofing, etc. Inspectors do NOT look for lead or other toxic metals. Environmental consultants should be consulted independently, at additional cost, should concerns exist.
The Inspection does not address environmental hazards such as the past use of insecticides, fungicides, herbicides, pesticides or termite treatments.
6) THE INSPECTION DOES NOT ADDRESS MOULD AND THE AIR QUALITY IN A BUILDING
The Inspection does NOT address irritants, pollutants, contaminants, or toxic materials in or around the building. This includes, for example, spores, fungus, mould, or mildew.
You should note that whenever there is water damage, there is a possibility that mould or mildew may be present, unseen behind a wall, floor, or ceiling.
If anyone in your home suffers from allergies or heightened sensitivity to quality of air, or if there are water penetration issues noted in the Report, we strongly recommend that you consult a qualified environmental consultant who can test for toxic materials, mould and allergens at an additional cost.
7) THE INSPECTION DOES NOT INCLUDE BURIED TANKS
Inspectors do NOT look for, and are not responsible for identifying, fuel oil, septic or gasoline tanks that may be buried on the property. If there are fuel oil or other storage tanks on the property, you may be responsible for their removal and the safe disposal of any contaminated soil. If you suspect there is a buried tank, we strongly recommend that you retain a qualified Environmental Consultant, at an additional cost, to investigate further.

	8) CANCELLATION FEE	
	If the Inspection is cancelled within 24 hours of the appointment time, a cancellation fee of 50% of t fee will apply.	he
	9) THERMAL IMAGING (If included with this Inspection)	
	The use of a thermal imager by your Inspector (which you can purchase for an extra cost) is for the purpose of screening for potential water issues. While the use of this equipment improves the odds detecting a moisture issue, it is not a guarantee, as numerous conditions can mask the thermal signa of moisture. Thermal imaging will not detect all moisture issues behind walls, ceilings, or furniture. Additionally, water leakage is often intermittent, and cannot be detected when not present.	
	10) MOULD ASSESSMENT (If included with this Inspection)	
	The services provided in this optional assessment (which you can purchase for an extra cost) include visual inspection for signs of water intrusion and mould growth. Moisture readings will be collected. indoor air samples and one outdoor reference sample will be collected. Should visible mould growth identified, one surface sample will be collected. The results of the sample and investigation will be summarized in a written Report.	Two
	The mould assessment will not be able to detect or identify all mould that may be present in the hole including that which is hidden behind walls, floors, ceilings, storage, or furniture.	me,
	11) REPORT IS FOR OUR CLIENT ONLY	
	The Report is for the exclusive use of the client named herein and their real estate agent if applicabl and will not be released to others without the client's consent. Canadian Association of Home & Property Inspectors

2023 National Standards of Practice

The National Standards of Practice are for home and property inspectors to follow in the performance of their inspections. They are the most widely accepted Canadian home and property inspection Standards in use and address all the home's major systems and components as listed in this Standard. The National Standards of Practice and Code of Ethics are recognized by many related professionals as the definitive standards for professional performance in the industry.

These National Standards of Practice are being published to inform the public on the nature and scope of visual building inspections performed by home and property inspectors who are members of the Canadian Association of Home & Property Inspectors (CAHPI).

The purpose of the National Standards of Practice is to provide minimum requirements for home and property inspectors regarding both the inspection itself and the inspection report, and to define certain terms relating to the performance of home or property inspections to ensure consistent interpretation.

These standards take into account that a visual inspection of a building does not constitute an evaluation or a verification of compliance with building codes, standards or regulations governing the construction industry or the health and safety industry, or standards and regulations governing insurability.

INDEX

Any terms not defined in the glossary of this standard will use industry standard terms.

Glossary Note: Italicized words are defined in the Glossary.

Report No. 89284 www.carsondunlop.com

APPENDIX 233 Rosethorn Ave. Toronto. ON July 20. 2024

OVERVIEW	ROOFING	EXTERIOR	STRUCTURE	ELECTRICAL	HEATING	COOLING	INSULATION	PLUMBING	INTERIOR
OUR ADVICE	APPENDIX	REFERENCE							

1. INTRODUCTION

1.1 The Canadian Association of Home & Property Inspectors (CAHPI) is a not-for-profit association. CAHPI strives to promote excellence within the profession and continual improvement of inspection services to the public.

2. PURPOSE AND SCOPE

2.1 The purpose of these National Standards of Practice is to establish professional and uniform Standards for home and property inspectors who are members of CAHPI. Home and Property Inspections performed to these National Standards of Practice are intended to provide information regarding the condition of the systems and components of the building as observed at the time of the Inspection.

These National Standards of Practice apply to inspections of part or all of a building for the following building types:

- single-family dwelling, detached, semi-detached or row house
- multi-unit residential building
- · residential building held in divided or undivided co-ownership
- residential building occupied in part for a residential occupancy and in part for a commercial occupancy, as long as the latter use does not exceed 40% of the building's total area, excluding the basement.

2.2 THE INSPECTOR SHALL:

A. inspect:

1. *readily-accessible*, visually-observable *installed systems*, and *components* of buildings listed in these National Standards of Practice.

B. report:

- 1. on those installed systems and components that, in the professional opinion or judgement of the *inspector*, have a significant deficiency, or are near the end of their service lives.
- 2. the implication for the system or component that has a significant deficiency or is near the end of its service life.
- 3. the inspector's recommendations to correct, repair, or refer for further evaluation of the reported deficiency by a qualified specialist.
- 4. on any *systems* and *components* designated for inspection in these National Standards of Practice which were known to be present at the time of the *Home or Property Inspection* but were not inspected and a reason they were not inspected.

2.3 These National Standards of Practice are not intended to limit inspectors from:

- **A.** including other inspection services in addition to those required by these National Standards of Practice provided the *inspector* is appropriately qualified to do so.
- **B.** excluding *systems* and *components* from the inspection if requested by the client or as dictated by circumstances at the time of the inspection.

3. GENERAL LIMITATIONS AND EXCLUSIONS

3.1 GENERAL LIMITATIONS:

- **A.** Inspections performed in accordance with these National Standards of Practice 1. are not *technically exhaustive*.
 - 2. will not identify concealed conditions or latent defects.

3.2 GENERAL EXCLUSIONS:

A. The *inspector* is not required to perform any action or make any determination unless specifically stated in these National Standards of Practice, except as may be required by lawful authority.

APPENDIX 233 Rosethorn Ave, Toronto, ON July 20, 2024	Report No. 89284
	PLUMBING INTERIOR
OUR ADVICE APPENDIX REFERENCE	
 B. Inspectors are NOT required to determine: condition of systems or components which are not readily accessible. remaining service life of any system or component. strength, adequacy, effectiveness, or efficiency of any system or component. causes of any condition or deficiency. methods, materials, or costs of corrections. future conditions including, but not limited to, failure of systems and components. suitability of the property for any use. compliance with regulatory requirements (codes, regulations, laws, ordinances, etc.). market value of the property or its marketability. advisability of the purchase of the property. presence of potentially hazardous plants, animals or insects including, but not limited to wood destroying organisms, diseases or organisms harmful to humans. 	
 presence of any environmental hazards including, but not limited to toxins, carcinogens, nois contaminants in soil, water, and air. effectiveness of any system installed or methods utilized to control or remove suspected haza substances. operating costs of systems or components. acoustical properties of any system or component. design adequacy with regards to location of the home or property, or the elements to which it is 	rdous
 C. Inspectors are NOT required to offer or perform: any act or service contrary to law, statute or regulation. engineering, architectural and technical services. work in any trade or any professional service other than home or property inspection. warranties or guarantees of any kind. 	
 D. Inspectors are NOT required to operate: 1. any system or component which is shut down or otherwise inoperable. 2. any system or component which does not respond to normal operating controls. 3. shut-off valves. 	
 E. Inspectors are NOT required to enter: 1. any area which will, in the opinion of the inspector, likely be hazardous to the inspector or oth persons or damage the property or its systems or components. 2. spaces which are not readily accessible. 	her
 F. Inspectors are NOT required to inspect: underground items including, but not limited to, storage tanks or other indications of their presence, whether abandoned or active. systems or components which are not installed. decorative items. systems or components located in areas that are not readily accessible in accordance with these Standards of Practice. detached buildings. common elements or common areas in multi-unit housing, such as condominium/strata prope cooperative housing when inspecting individual units, including the roof and building enveloped? test and/or operate any fire alarm system, burglar alarm system, automatic sprinkler system of fire protection equipment, electronic or automated installations, telephone, intercom, cable/ in systems and any lifting equipment, elevator, freight elevator, wheelchair lift, climbing chair, esc others; pools, spas and their associated safety devices. 	rties, or e. or other hternet
 G. Inspectors are NOT required to: 1. perform any procedure or operation which will, in the opinion of the inspector, likely be hazar to the inspector or other persons or damage the property or its systems or components. 2. move suspended ceiling tiles, personal property, furniture, equipment, plants, soil, snow, ice, or 3. dismantle any system or component.

OUR ADVICE APPENDIX REFERENCE

4. STRUCTURAL SYSTEMS

4.1 THE INSPECTOR SHALL:

- A. inspect:
 - 1. *structural components* including visible foundation and framing.
- B. report:
 - 1. methods used to *inspect* the *crawl space*.
 - 2. methods used to *inspect* the attics.

5. EXTERIOR SYSTEMS

5.1 THE INSPECTOR SHALL:

A. inspect:

- exterior wall coverings, flashing and trim.
 all exterior doors.
- 3. decks, balconies, stairs, porches, and their associated guards and handrails.
- 4. eaves, soffits, and fascia where visible from the ground level.
- 5. grading, and surface drainage.
- 6. walkways, patios, and driveways.
- 7. retaining walls and fences.
- 8. attached garages or carports including garage doors and garage door operators.
- B. report:
 - 1. the methods used to inspect the exterior walls and their related components.

5.2 THE INSPECTOR IS NOT REQUIRED TO:

A. inspect:

- 1. screening, shutters, awnings, and similar accessories.
- 2. geological, geotechnical, or hydrological conditions.
- 3. recreational facilities.
- detached garages and outbuildings except as required by local authority with jurisdiction.
 mechanical lifts.
- 6. seawalls, breakwaters, dikes, and docks.
- 7. erosion control and earth stabilization measures.

6. ROOF SYSTEMS

6.1 THE INSPECTOR SHALL:

A. inspect:

- roof coverings.
- 2. roof drainage systems.
- flashings.
- 4. skylights, chimneys, and roof penetrations.

B. describe:

1. roof coverings.

C. report:

1. methods used to inspect the roofs.

6.2 THE INSPECTOR IS NOT REQUIRED TO:

A. inspect:

- antennae and satellite dishes.
 interiors of flues or chimneys.
- other *installed* items attached to but not related to the roof systems.

7. PLUMBING SYSTEMS

7.1 THE INSPECTOR SHALL:

A. inspect:

- 1. interior water supply and distribution *systems* including all fixtures and faucets.
- 2. drain, waste and vent *systems* including all fixtures.
- 3. water-heating equipment and associated venting systems.
- 4. fuel storage and distribution systems.
- 5. drainage sumps, sump pumps, and related piping.
- 6. backflow preventers on supply piping.

B. describe:

- 1. water supply, distribution, drain, waste, and vent piping materials.
- 2. water heating equipment including the energy source.
- 3. location of main water and fuel shut-off valves.

7.2 THE INSPECTOR IS NOT REQUIRED TO:

A. inspect:

- 1. clothes washing machine connections.
- 2. wells, well pumps, cisterns, or water storage related equipment.
- 3. water conditioning systems.
- 4. solar water heating systems.
- 5. fire sprinkler systems.
- 6. private waste disposal systems.
- 7. irrigation systems.

B. determine:

- 1. whether water supply and waste disposal *systems* are public or private.
- 2. the quantity or quality of the water supply.

C. operate:

1. safety valves or shut-off valves.

8. ELECTRICAL SYSTEMS

8.1 THE INSPECTOR SHALL:

- A. inspect:
 - 1. service drop.
 - 2. service entrance conductors, cables, and raceways.
 - 3. service equipment and main disconnects.
 - service grounding.
 - 5. interior components of service panels and sub panels.

A. inspect:

APPENDIX

- 1. remote control devices unless the device is the only control device.
- 2. alarm systems and components.
- 3. low voltage wiring, systems and components.
- 4. ancillary wiring, systems and components not a part of the primary electrical power distribution system.
- 5. telecommunication equipment.
- B. measure:
 - 1. amperage, voltage, or impedance.
- C. operate or test:
 - 1. smoke alarms.
 - 2. carbon monoxide alarms.

9. HEATING SYSTEMS

9.1 THE INSPECTOR SHALL:

- A. inspect:
 - 1. installed heating equipment.
 - 2. vent systems, flues, and chimneys.
 - 3. fuel storage and distribution systems.

9.2 THE INSPECTOR IS NOT REQUIRED TO:

- A. inspect:
 - 1. interiors of flues or chimneys.
 - 2. heat exchangers.
 - 3. auxiliary equipment.
 - 4. solar heating systems.

B. determine:

1. system adequacy or distribution balance.

10. FIREPLACES AND SOLID FUEL BURNING APPLIANCES

10.1 THE INSPECTOR SHALL:

- A. inspect:
 - 1. fireplace and solid fuel burning system components.
 - 2. vent systems and chimneys.

B. describe:

1. fireplaces and solid fuel burning appliances.

10.2 THE INSPECTOR IS NOT REQUIRED TO:

A. inspect:

1. interior of flues or chimneys.

- 2.screens, doors and dampers.
- 3. seals and gaskets.
- 4. automatic fuel feed devices.
- 5. heat distribution systems whether fan-assisted or convection.
- B. ignite or extinguish fires or pilot lights.
- C. determine draft characteristics.
- D. move fireplace inserts, stoves, or firebox contents.

11. AIR CONDITIONING SYSTEMS

11.1 THE INSPECTOR SHALL:

- A. inspect
 - 1. permanently installed air conditioning equipment.

11.2 THE INSPECTOR IS NOT REQUIRED TO:

- A. inspect
 - 1. portable air conditioners.
- **B.** determine:
 - 1. system adequacy or distribution balance.

12. INTERIOR SYSTEMS

12.1 THE INSPECTOR SHALL:

- A. inspect:
 - 1. walls, ceilings, and floors.
 - 2. stairs, guards and handrails.
 - 3. a representative number of countertops and installed cabinets.
 - 4. a representative number of doors and windows.
 - 5. gas proofing of walls, doors and ceilings
 - separating the habitable spaces and the garage.
 - 6. fire separations.

12.2 THE INSPECTOR IS NOT REQUIRED TO: A. inspect:

- 1. decorative finishes.
- 2. window treatments.
- 3. central vacuum systems.
- 4. household appliances.
- 5. recreational facilities.

13. INSULATION AND VAPOUR RETARDERS

13.1 THE INSPECTOR SHALL:

- A. inspect:
- 1. insulation and vapour retarders.

B. describe:

in unfinished spaces.

13.2 THE INSPECTOR IS NOT REQUIRED TO: A. disturb:

- 1. insulation.
- 2. vapour retarders

OUR ADVICE REFERENCE APPENDIX

ROOFING

14. MECHANICAL AND NATURAL VENTILATION SYSTEMS

14.1 THE INSPECTOR SHALL:

A. inspect:

- 1. ventilation of attics and foundation areas.
- 2. mechanical ventilation systems.
- 3. the ventilation systems in areas where moisture is generated such as kitchens, bathrooms, laundry rooms.

14.2 THE INSPECTOR IS NOT REQUIRED TO:

B. determine:

1. indoor air quality.

2. system adequacy or distribution balance.

GLOSSARY

Adjacent

Nearest in space or position; immediately adjoining without intervening space.

Alarm Systems

Warning devices, installed or free-standing, including but not limited to; carbon monoxide alarms, flue gas and other spillage alarms, security equipment, ejector pumps and smoke alarms

Architectural Service

Any practice involving the art and science of building design for construction of any structure or grouping of structures and the use of space within and surrounding the structures or the design for construction, including but not specifically limited to, schematic design, design development, preparation of construction contract documents, and administration of the construction contract, adequacy of design for the location and exposure to the elements.

Automatic Safety Controls

Devices designed and installed to protect systems and components from unsafe conditions.

Component

A part of a system.

Crawl Space

The area within the confines of the foundation and between the ground and the underside of the floor.

Decorative

Ornamental; not required for the operation of systems and components of a building.

Describe

To report a system or component by its type or other observed, significant characteristics to distinguish it from other systems or components.

Determine

To find out, or come to a conclusion by investigation.

Dismantle

To take apart or remove any component, device, or piece of equipment that would not be taken apart or removed by a homeowner in the course of normal and routine homeowner maintenance.

Engineering Service

Any professional service or creative work requiring engineering education, training, and experience and the application of special knowledge of the mathematical, physical and engineering sciences to such professional service or creative work as consultation, investigation, evaluation, planning, design and supervision of construction for the purpose of assuring compliance with the specifications and design, in conjunction with structures, buildings, machines, equipment, works or processes.

Functionality

The purpose that something is designed or expected to fulfill.

Further Evaluation

Examination and analysis by a qualified professional, tradesperson or service technician beyond that provided by the home inspection.

Report No. 89284 www.carsondunlop.com

OVERVIEW	ROOFING	EXTERIOR	STRUCTURE	ELECTRICAL	HEATING	COOLING	INSULATION	PLUMBING	INTERIOR
OUR ADVICE	APPENDIX	REFERENCE							

Home and Property Inspection

The process by which an *inspector* visually examines the *readily accessible systems* and *components* of a building in accordance with these National Standards of Practice.

Household Appliances

Kitchen, laundry, and similar appliances, whether *installed* or freestanding.

Inspect

APPENDIX

To examine *readily accessible systems* and *components* of a building in accordance with these National Standards of Practice, *where applicable* using *normal operating controls* and opening *readily openable access panels*.

Inspector

A person hired to examine any *system* or *component* of a building in accordance with these National Standards of Practice.

Installed

Set up or fixed in position for current use or service.

Mechanical Ventilation Systems

An active or powered air exhaust and/or intake system installed to remove moisture or contaminants from, or introduce fresh air into, the living space.

Normal Operating Controls

Devices such as thermostats, switches or valves intended to be operated by the homeowner.

Operate

To cause to function, turn on, to control the function of a machine, process, or system.

Readily Accessible

Available for visual inspection without requiring moving of personal property, *dismantling*, destructive measures, or any action which will likely involve risk to persons or property.

Readily Openable Access Panel

A panel provided for homeowner inspection and maintenance that is within normal reach, can be removed by one person, and is not sealed in place.

Recreational Facilities

Spas, saunas, steam baths, swimming pools, exercise, entertainment, athletic, playground or other similar equipment and associated accessories.

Report

To communicate in writing.

Representative Number

One *component* per room for multiple similar interior *components* such as windows and electric outlets; one *component* on each side of the building for multiple similar exterior *components*.

Roof Drainage Systems

Components used to carry water off a roof and away from a building.

Sample

A representative portion selected for inspection.

Service Life/Lives

The period during which something continues to function fully as intended.

Shut Down

A state in which a *system* or *component* cannot be operated by *normal operating controls.*

Significant Deficiency

A clearly definable hazard or a clearly definable potential for failure or is unsafe or not functioning.

Solid Fuel Burning Appliances

A hearth and fire chamber or similar prepared place in which a fire may be built, and which is built in conjunction with a chimney; or a listed assembly of a fire chamber, its chimney and related factory-made parts designed for unit assembly without requiring field construction.

Spa

Residential recreational or therapeutic device.

Structural Component

A component that supports non-variable forces or weights (dead loads) and variable forces or weights (live loads).

System

A combination of interacting or interdependent components, assembled to carry out one or more functions.

Technically Exhaustive

An inspection is technically exhaustive when it is done by a specialist who may make extensive use of measurements, instruments, testing, calculations, and other means to develop scientific or engineering findings, conclusions, and recommendations.

Technical Services

Services that involve dismantling, the extensive use of advanced techniques, measurements, instruments, tools, testing, calculations, or other similar methods.

APPENDIX							Report No. 89284

OVERVIEW	ROOFING	EXTERIOR	STRUCTURE	ELECTRICAL	HEATING	COOLING	INSULATION	PLUMBING	INTERIOR	
OUR ADVICE	APPENDIX	REFERENCE								

Unsafe

A condition in a *readily accessible, installed system* or *component* which is judged to be a significant risk of personal injury during normal, day-to-day use. The risk may be due to damage, deterioration, missing or improper installation or a change in accepted residential construction Standards.

Vapour Retarder

Material used in the building envelope to retard the passage of water vapour.

Visually Accessible

Able to be viewed by reaching or entering.

Note - In these National Standards of Practice, redundancy in the description of the requirements, limitations and exclusions regarding the scope of the Home and Property Inspection is provided for clarity not emphasis.
